

Style 24

Styling Technique

Use a vent brush to comb hair diagonally back and up. Pull a small amount of hair down over the forehead in bang area to create softness. Nape should be turned under. Top can be lightly backbrushed for more fullness.

24

Cutting Technique

This cut is a high elevation with top and sides cut to 3½ inches and the back tapered down to approximately 1½ inches. As with all short cuts, the nape can be adjusted to clients growth patterns.

Design Technique

Hair is blown dry with round brushes. Start in nape drying under and down. Sides and crown are dried diagonally up, and overdirected for fullness. Top is dried back and bangs are directed across and down. A ¾-inch curling iron can be used to reinforce the style.
